

Smart Solutions For Constructions

# About Us

---

- SSC is one of the leading companies in the industry of security technology of all kinds and the manufacture of smart home technology, including the industry of advanced technological equipment and interior and exterior decoration, making life safer and easier.
- The misconception prevalent in societies regarding smart home systems and dealing with them as a luxury has led us to spread the right concept of intelligent systems as a means of protection and safety.
- Smart systems are the cornerstone of coexistence with people with special needs and overcoming the difficulties and obstacles that face them in their daily lives.
- Smart systems are the best way to keep businesses and individuals safe.
- Smart Solutions also has extensive experience in establishing and connecting wireless and wired networks, CCTV systems, fire systems, early detection systems for thefts, web design, solar energy systems, interior and exterior finishes, and technical and engineering consultancy for companies, factories and individuals.

# Our Goals:-

- **Effective cost-saving strategies.**
- **Achieve project-specific objectives with carefully planned resource control.**
- **Build a good reputation in this field and play a key role in the industry**
- **Long-term relationships with our cadres and provide exceptional services by pursuing business through innovation and advanced technology**

**CCTV  
Systems**

**Gas & Water  
leakage detection**

**Visual and audio**

**Control systems  
& business  
management**

**Our  
Services**

**Smart  
Homes**

**Networking**

**Decoration**

**Early detection  
of thefts**

**Solar energy**

**Fire Systems**

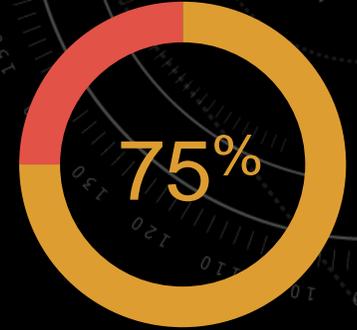

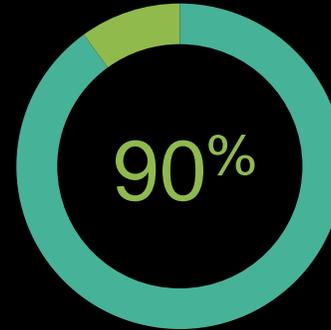

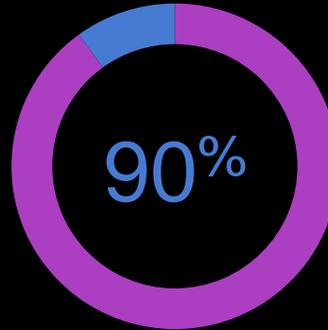

## SSC Team Leaders

The first and the only first Goal to SSC Team Leaders is to achieve 100% of client comfort by executing project in a minimum time with highest performance and less money. This goal comes parallel with high efficiency Team and high quality product.

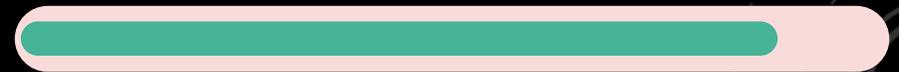

## Statistics

Time

Performance

Save Money

# SMART HOMES

Smart home technology is the only technology that carries a strong eye and a strong hand to help housewives protect children from the dangers surrounding them and a tool that helps in providing a healthy and ideal environment. This technology enables the housewife to control the temperature, intensity of light, content Audio and video, general hygiene, alarm and fire systems while maintaining complete privacy.

It is a technology that helps to overcome obstacles for people with special needs without compromising their weaknesses. On the contrary, this technique is useful to the highest degree of people with special needs, as they develop their self-confidence and the ability to participate and interact and self-reliance without the need of people they understand what they want and implement immediately .

Smart homes respond to the sound of the sound when you enter the building is remote sensing and lighting the lights, which means that the lighting in these buildings feel movement as well.

The system of smart security houses is very sophisticated. There are surveillance cameras everywhere that close the windows and doors. If they are opened, a warning is issued and a message can be sent to your phone if one of your home is forcibly entered.

# CCTV

Stable on the principle of the company in providing the highest performance and the highest quality and low cost we are the SSC to develop plans appropriate to the needs of customers, ensuring access to maximum efficiency and the highest levels of security without the need for expensive equipment.

- factories.
- companies.
- schools.
- Hospital coverage.
- stores.
- Garden .
- Malls .
- Cover houses.
- Hotels and Resorts.

Works on all computer systems and mobile.

# Firefighting & Fire alarm systems

Fire alarm system is one of the most important factors to save lives and reduce the material losses in the establishment or plant or building. It is the specialty of the security department in the company to follow up the alarm systems and the goal of early warning when the fires occur and the speed of dealing with fires before they spread.

The main purpose of the fire detection systems is to quickly respond to the fire and then turn this early response to an audio and visual signal to alert the individual or group of individuals in the building that we can use in the fire stages

SSC is one of the leading companies in the development and implementation of appropriate plans for each facility according to their needs, which ensures access to maximum safety and protection.

# Solar Power Systems

Solar energy systems are a technology that transforms the sun falling on the photovoltaic panels into electrical energy that you can use to meet your needs in the home or the facility or even part of it. This depends on the size of the system itself and the extent of your consumption of electricity and your geographical location on the map. The intensity of solar radiation varies from country to others and even from one city to another.

God has loved Egypt for most of this clean and renewable energy that is inexhaustible as it is the country that enjoys the sunshine most of the year, and high and the average brightness of the sun to approximately 6 hours. The solar system can be used in a personal way to save or invest energy, as this energy can be sold.

SSC has developed the concept of dealing with solar energy in Egypt to reach the largest customer base based on the expertise and competencies of its engineers and gain the confidence of its partners in this field.

# Early detection systems for thefts

The general concept of early detection systems for thefts in some is limited to smart homes and surveillance cameras.

But, SSC has a comprehensive and concept of protection as we believe as a specialized company in this field and from the experience of many that the early protection of thefts starting from the protection of individuals first as the company developed a protection system that connects the individual home or company through a wide-area security network.

This concept is broader, for example, in linking children and family members to each other, tracking their movements, mapping the places visited, and alerting parents in case of danger.

The company also offers the latest detection systems for burglaries of houses, companies and factories against the risk of theft and intrusion and contact the mobile phone immediately after any intrusion attempt, can be through the sophisticated alarm system to detect theft before the occurrence whether you are in place or away from him and at the same time terrorism thief, Advanced systems can also be detained.

# Gas & Water leakage detection

- The problem of water leakage in the buildings is one of the problems facing many people and result in many damage, through which the waste of large amounts of water, which affects economically to the residents of buildings.
- It also increases the amount of moisture in the walls and ceilings. This leads to damage to the construction and damage to the adjacent and adjacent furniture. It works on the appearance of fungi and mold in the building, which leads to rusting the steel rails that are the basis of building in any house and weakening its structure.
- SSC features state-of-the-art water leak detection devices and timely and convenient solutions to avoid this leakage.
- We also recognize the introduction of the latest technologies in the detection of early gas leakage ways to avoid fire and suffocation.

# Wired & Wireless networks

Wired and wireless networks are the basic foundation for everything that is dealt with in our daily lives.

Where the vocabulary of daily life from information, news and entertainment to a strong and solid base in the transfer of information from the source to the recipient and vice versa.

SSC is one of the companies that has long experience in establishing and developing plans and solutions that are suitable for each individual user. We believe that the information is the first way to success. We rely on the latest methods, systems and equipment to guarantee the highest speed of information access and the highest quality products. The role of the company is not only to establish and link, but also to maintain existing networks.

SSC is a leading provider of cost-effective networking solutions.

As well as service networks, satellite Internet solutions and fiber optic networks.

# Finishes and interior and exterior decorations

The psychological comfort of the individual depends on several factors surrounding it reflected on either negative or positive, which makes colors and consistency is the main factor of psychological comfort.

With this belief, SSC has selected the most qualified staff to design and implement interior and exterior décor to meet customer needs and maximize comfort and coexistence.

The psychological comfort of the individual begins with the joy and hope that surrounds him in his home and work place and places where he spends his free time, which is our main concern in the design of decorations to suit the taste of each customer.

Also distinguished by the following:

Complete finishes (facades - walls - floors - ceilings).

Interior Decorations (Suspended Ceilings - Kranish Modern)

Modern Furniture - Modern Kitchens.

Decoration of rooms and children's rooms.

Ladders luminous.

Optical and sound systems.

Garden Decorations.

# Access Control Systems

Access control is an issue of who, where and when the access control system determines which people are allowed to enter or exit, where they are allowed to exit or log in, and when they are allowed to enter or exit. Historically, this has been accomplished partially through keys and locks. When the door is locked, only the person with the key can enter from the door, depending on how the lock is configured. Do not allow mechanical locks and keys to restrict the key holder to specific times or dates. Mechanical locks and keys do not provide records of the user key on any specific door, and the keys can be copied easily or transferred to an unauthorized person. When a mechanical key is lost or the key holder is no longer authorized to use the protected area, the keys must be reset, electronic access control is used by computers to resolve the locks and mechanical keys

# Business Management & Point Of Sales

SSC provides software and hardware solutions suitable for companies and business activities to cope with the nature of those enterprises, which depends on the speed of implementation of sales and movements of the store, taking into account the accuracy and ease of dealing with those programs, which helps management to make the right decision.

## System features:

- Multi-user security system and powers.
- The possibility of initial registration of documents, accreditation and deportation.
- Possibility of remote monitoring.
- The possibility of linking data between the branches and the main center.
- Multi-language application interface.
- Maintenance and technical support remotely.

## Types of systems:

- Accounting systems.
- Warehouse Systems.
- Cashier systems.
- Barcode systems.

The background is a deep black space filled with numerous stars of varying sizes and colors, including white, yellow, and blue. A prominent, glowing spiral galaxy is visible in the center, its arms radiating outwards. The overall scene is a rich, multi-colored star field.
